1. Executive Summary

Adinkra Microfinance Ltd (Accra) suspected that a staff accountant, Kwabena Asare, who worked on workstation FIN-WS-07, had been job-hunting on company time and had moved a confidential client list out of the organisation ahead of resigning to start a competing practice. A USB flash drive linked to the subject was seized and imaged for examination. Analysis of that image found browser, document, and receipt evidence consistent with the allegation: the subject searched for new jobs and for how to export company data, uploaded a client spreadsheet and a QuickBooks backup to a personal Dropbox account, emailed himself a backup link, registered a competing business, purchased a personal laptop, and drafted a resignation letter, all within a five-day window (15 to 20 September 2023). No evidence of anti-forensic activity, such as timestamp manipulation, was found. An apparent date/time inconsistency identified during initial review was traced to a display limitation in the examination tool rather than to the underlying evidence, and is documented in Finding 5.10.

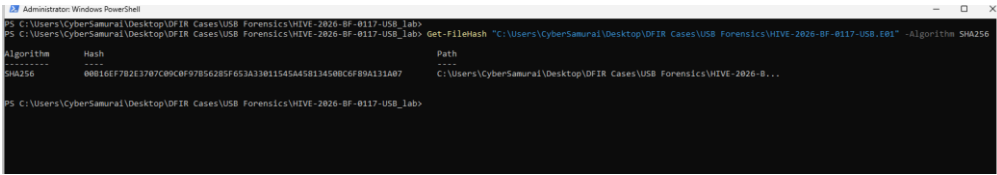

2. Scope & Objectives

- Scope:** one USB flash drive image (HIVE-2026-BF-0117-USB.E01), FAT32 volume KASARE_USB, containing a preserved Google Chrome profile and personal documents, receipts, and images belonging to the subject.
- Objectives:** reconstruct the subject's web browsing activity; determine whether that activity is corroborated by on-disk documents and receipts; establish whether data was exfiltrated and by what channel; build a timeline of the subject's actions between 15 and 20 September 2023.
- Out of scope:** no \$MFT, \$LOGFILE, \$USNJRNL, or Windows registry hives were available, the volume is FAT32, not NTFS, so these artifacts do not exist on this drive. No live system or memory analysis was performed, and no network-level evidence was examined.

3. Evidence & Chain of Custody

Item #	Description	Source	Hash (SHA-256)	Date Acquired	Acquired By
1	HIVE-2026-BF-0117-USB.E01	Synthetic training exhibit, HIVE CONSULT	Container: 00B16EF7B2E3707C09C0F97B56285F653A33011545A45813450BC6F89A131A07 Media MD5: f1336b78c7b9771d0f1c6c78c116b479 Media SHA1: 6f3aba0cb15869372dd1311674e9a353e7ec641a	14 Jul 2026, 10:11:18	HIVE CONSULT

Note: this is a synthetic training exhibit, not real custody evidence. The hash values above were independently recalculated against the supplied image and match the values recorded at acquisition, confirming the file examined is unaltered.

Independent hash verification of the container file.

4. Tools & Methodology

Tool	Version	Purpose
Autopsy	4.22.1	Primary GUI triage: Web History, File Metadata, Data Artifacts
Sleuth Kit / libewf	current (apt)	Direct image mounting and verification (mmls, fsstat, fls, icat)
sqlite3	3.45.1	Direct query of the Chrome History database
Python 3	3.x	WebKit-epoch timestamp decoding and cross-checks

Methodology:

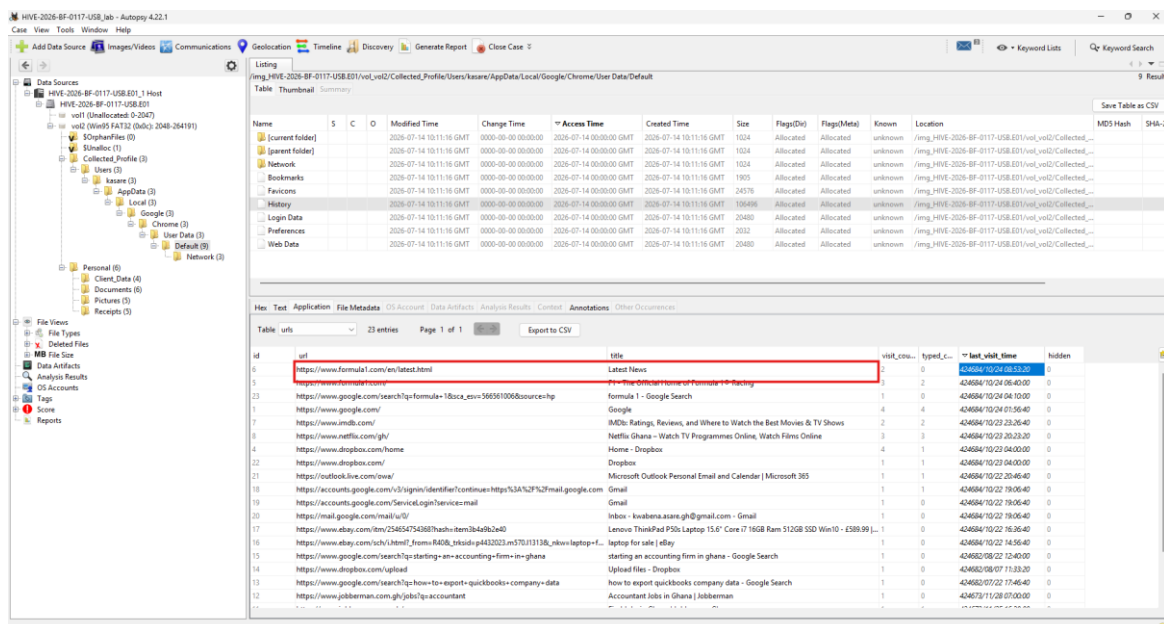

- Verify container integrity against the published MD5/SHA1 (media) and SHA256 (container) hashes before analysis.
- Mount the E01 (ewfmount) and confirm the partition and filesystem layout (mmls, fsstat).
- Triage the Chrome profile in Autopsy (Web History, Login Data, Downloads) to reconstruct browsing activity.
- Where Autopsy's raw SQLite table view produced anomalous timestamps, extract the History database directly (icat) and re-derive timestamps using the WebKit epoch formula, cross-checked against a purpose-written SQL query.
- Correlate browser artifacts against on-disk documents, receipts, and screenshots recovered from the same image.
- Build a consolidated timeline and validate each finding against at least one independent artifact.

5. Findings

5.1 Last known activity

Observation: The last page the subject visited before the browsing session ended was the Formula 1 “Latest News” page.

Evidence: Web History: title “Latest News”, URL <https://www.formula1.com/en/latest.html>, timestamp 2023-09-19 09:58:08 UTC. Source path: /Users/kasare/AppData/Local/Google/Chrome/User Data/Default/History.

History file location and metadata.

Interpretation: This is the final entry in the subject's browsing history and marks the end of the reconstructed session on 19 September 2023.

5.2 Exit-plan browsing pattern

Observation: Five search terms in the history indicate the subject was researching new employment and independently starting a competing accounting practice; leisure searches were excluded.

Evidence: Web History url/title table:

id	url	title	visit_c...	typed_c...	last_visit_time	hidden

Search-term evidence from Web History.

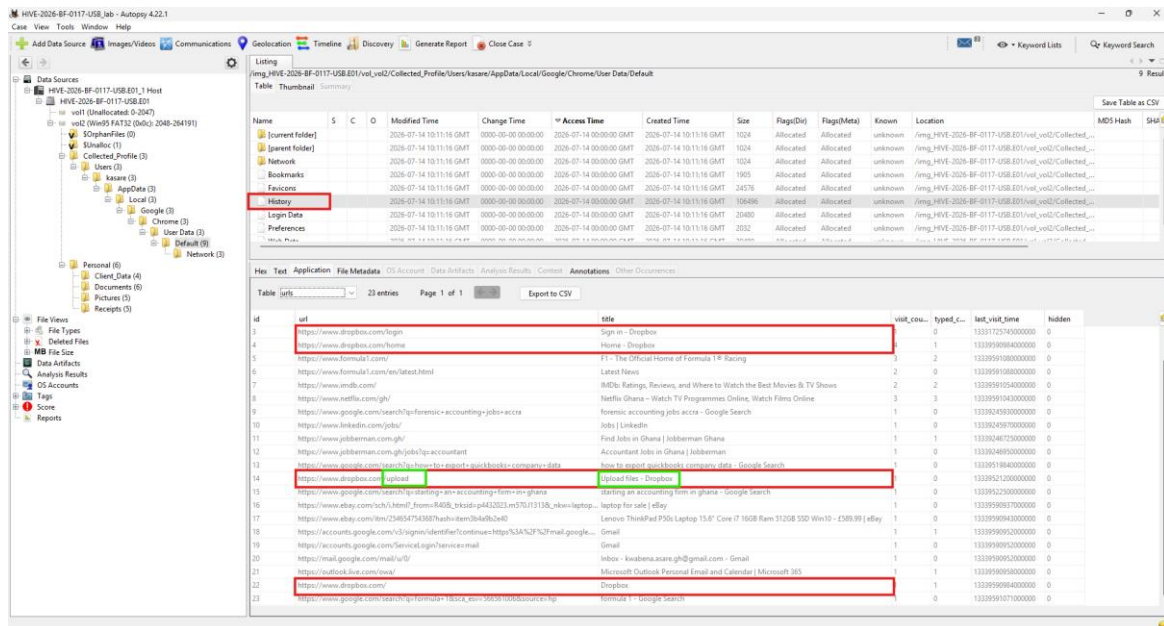

URL	Title
google.com/search?q=starting+an+accounting+firm+in+ghana	starting an accounting firm in ghana - Google Search
jobberman.com.gh/jobs?q=accountant	Accountant Jobs in Ghana Jobberman
jobberman.com.gh/	Find Jobs in Ghana Jobberman Ghana
linkedin.com/jobs/	Jobs LinkedIn
google.com/search?q=forensic+accounting+jobs+accra	forensic accounting jobs accra - Google Search

Interpretation: The combination of job-search terms and a business-formation search shows deliberate research into both leaving the company and competing with it, not incidental browsing.

5.3 Personal cloud storage and initial access (Dropbox)

Observation: Dropbox was the personal cloud service used by the subject, first accessed 2023-06-20 09:09:05 UTC and visited eight times in total.

Evidence: Attribution is established two ways: the URL directory pattern (dropbox.com/upload) and the saved Chrome credential for kwabena.asare.gh@gmail.com against dropbox.com/login. The corrected first-access timestamp is independently corroborated by the Dropbox Plus payment receipt, billing date 20 Jun 2023.

Logins Data: Dropbox credential attribution.

Dropbox visit count from Web History.

Interpretation: Dropbox access predates the exfiltration event by roughly three months, consistent with routine personal use of the service before it was repurposed as an exfiltration channel on 18 September 2023.

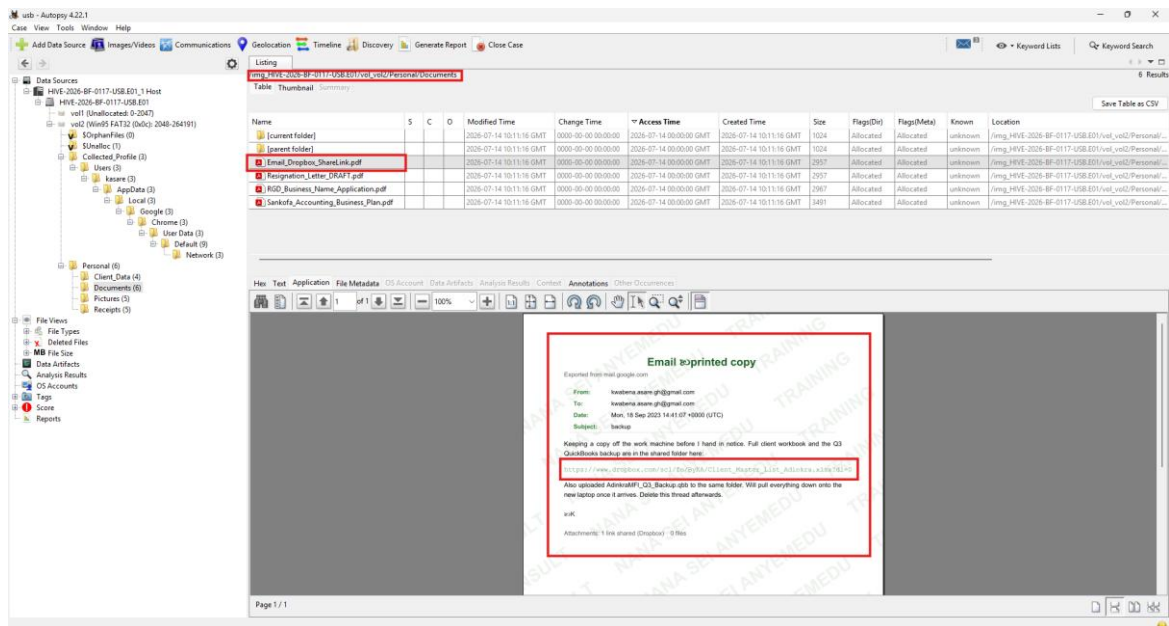

5.4 Intent versus accident (typed vs. link navigation)

Observation: Of the two job-search sites in the history, jobberman.com.gh was reached by direct address entry (typed_count = 1); linkedin.com/jobs was reached only via a search-result link.

Evidence: Web History transition data for both URLs.

Client_Data folder listing on the USB drive.

Dropbox upload confirmation screenshot.

Interpretation: The existence of this file on the subject's personal USB drive, combined with the export search and the Dropbox upload activity, is consistent with data having been moved from the workstation FIN-WS-07 to both a personal cloud account and this drive.

5.7 Purchase confirmation

Observation: The ThinkPad viewed on eBay (Finding 5.5) was purchased the same session.

Evidence: Receipt_eBay_ThinkPad_P50s.png, order #12-11834-95027, ordered 19 Sep 2023 09:56 UTC. Item total GBP 634.19 with import charges, GBP 589.99 without, matching the listing viewed in Finding 5.5.

eBay — Order Confirmation

Order number: 12-11834-95027

Order date: 19 Sep 2023, 09:56 UTC

Sold by: techmart_uk_deals (99.2%)

ITEM

Lenovo ThinkPad P50s Laptop 15.6"

Core i7 • 16GB RAM • 512GB SSD • Windows 10

Condition: Used - Very Good

Item no: 254654754368

Item price	GBP 589.99
Postage	GBP 0.00
Import charges	GBP 44.20
Order total	GBP 634.19

Deliver to:

Kwabena Asare

P.O. Box AN 4471

Accra North, Greater Accra

Ghana

Payment: PayPal • k****a@gmail.com

Estimated delivery: 02 - 09 Oct 2023

Property of HIVE CONSULT | Developed by Nana Sei Anyemedu • SYNTHETIC TRAINING EXHIBIT

eBay order confirmation receipt.

Interpretation: The receipt timestamp sits six to nineteen seconds after the corrected browser timestamps for the same item, consistent with a genuine search-to-purchase flow and inconsistent with any timestamp manipulation.

5.8 Documented intent to leave

Observation: Three separate documents on the drive show concrete steps toward resignation and starting a competing practice.

Evidence: (1) Receipt_RGD_Business_Registration.png and RGD_Business_Name_Application.pdf, business name registration filed 18 September 2023, corroborated by the “starting an accounting firm in ghana” search the same day. (2) Sankofa_Accounting_Business_Plan.pdf, a business plan for the registered entity, SANKOFA ACCOUNTING & ADVISORY. (3) Resignation_Letter_DRAFT.pdf, drafted 20 September 2023, two days after the registration filing, not yet sent, with an effective resignation date of 6 October 2023.

SANKOFA ACCOUNTING & ADVISORY

Confidential business plan (working draft) v1-K. Asare, September 2023

1. Concept

Sankofa Accounting & Advisory will provide bookkeeping, tax filing, payroll and advisory services to micro and small enterprises in Greater Accra. The founder brings direct experience from the microfinance sector and existing relationships with a book of active clients.

2. Target clients

Initial outreach will focus on the SME and trader clients I currently service at my present employer. A prospect list of approximately 40 active clients (see accompanying workbook 'Active_Client_Master_List.xlsx') has been compiled with contact details and current facility balances to prioritise early conversion.

3. Start-up requirements

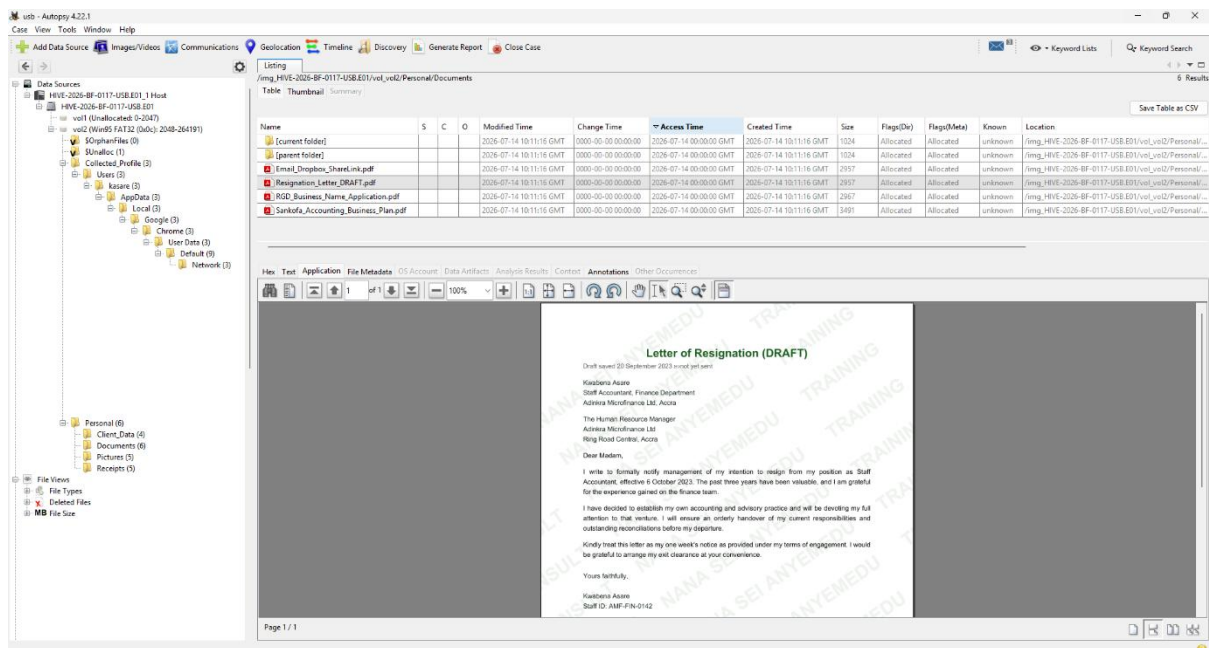

Item	Estimated cost
Workstation (Lenovo Thinkpad P70, imported)	GHS 7,500
Cloud storage (Dropbox Plus, annual)	GHS 1,450
Business name registration (RGD)	GHS 100
Accounting software licenses	GHS 2,300
Working capital (3 months)	GHS 8,000

4. Timeline

Register business name (Sep 2023), acquire equipment and migrate working files to personal cloud (Sep 2023), serve notice at current employer (early Oct 2023), begin client onboarding (Oct 2023).

Business plan document.

Resignation Letter Draft

Interpretation: These are concrete, dated actions rather than idle browsing, and place the registration, the exfiltration, and the resignation draft within a single five-day window.

5.9 Exfiltration channel: self-addressed email

Observation: A self-addressed email shows how the exfiltrated data left the organisation and ties directly to the Dropbox activity in the browser history.

Evidence: Email_Dropbox_ShareLink.pdf, sent from and to kwabena.asare.gh@gmail.com on 18 September 2023 at 14:41:07 UTC, subject “backup”, sharing a Dropbox link to Client_Master_List_Adinkra.xlsx and noting that AdinkraMFI_Q3_Backup.qbb was also uploaded to the same folder. The email states: “Keeping a copy off the work machine before I hand in notice.”

Interpretation: The email, the Dropbox upload screenshot (Finding 5.6), and the Web History entry for dropbox.com/upload are three independent artifacts describing the same event, sent seven minutes after the upload page was visited, which is strong corroboration that the upload was deliberate and that the subject intended to resign shortly afterward.

5.10 Timestamp discrepancy resolved (tool limitation, not evidence tampering)

Observation: An apparent date/time inconsistency identified during initial review (affecting the Dropbox first-access date and the eBay session in Findings 5.3 and 5.5) was investigated and resolved.

Evidence: Chrome/WebKit stores browser timestamps as microseconds since 1601-01-01, not the Unix epoch. Autopsy's raw SQLite table viewer (File Metadata > Application > Table: urls) does not decode this correctly and renders a garbled six-digit year. Re-extracting the History database directly and decoding it with the query `datetime(last_visit_time/1000000-11644473600,'unixepoch')` produces timestamps that match the vendor receipts to within seconds.

Interpretation: The discrepancy originated in the examination tool's raw table view, not in the underlying evidence. No time-stomping or anti-forensic activity is indicated; browser activity and receipts are tightly self-consistent throughout the case.

6. Examiner's Concerns & Discrepancies

Most of the evidence in this case was straightforward. A handful of items were not, and each one is documented here rather than dismissed. The principle applied throughout this examination is that an unanswered question about the evidence is not automatically a sign of tampering, but left unexamined, it becomes a legitimate line of cross-examination in any adversarial proceeding. Every item below was investigated to a documented conclusion, whether that conclusion is a resolution or an acknowledged open question.

6.1 File size mismatch

Observation: the file sizes shown in the Dropbox upload screenshot do not match the sizes of the corresponding files recovered from the USB drive: Client_Master_List_Adinkra.xlsx is shown as 471 KB in the screenshot versus 7,057 bytes (≈ 6.9 KB) recovered; AdinkraMFI_Q3_Backup.qbb is shown as 18.0 MB versus 3,145,853 bytes (≈ 3.0 MB) recovered.

Status: open. This is roughly an order of magnitude apart on both files and deserves an explanation rather than dismissal. No definitive cause was established from the artifacts available; it is documented here for follow-up with the exhibit's originator rather than assumed to be immaterial.

6.2 Filename inconsistency

Observation: the file recovered from the USB drive is named Adinkra_Client_Master_List.xlsx. The Dropbox upload screenshot and the self-addressed email both reference Client_Master_List_Adinkra.xlsx, the same two words in reversed order. Combined with the size mismatch in 6.1, this warranted further verification.

Verification attempted: hash comparison, the most reliable way to confirm whether two files are identical regardless of naming, could not be performed here, because only the USB-resident file has recoverable byte content. The Dropbox screenshot is an image of a UI, not a file, so there is nothing on that side to hash. The recovered file's hashes are recorded for the file that does exist: Adinkra_Client_Master_List.xlsx, MD5 40f8e5106e0f5ee96b00015070303552, SHA256 22f76a716b123aad7bf39a857456ef58ad0fa7497d39361e1df83837e1771f47.

Status: open. A naming difference alone does not change a file's hash, hashes depend only on byte content, so the reversed word order by itself proves nothing. However, the size mismatch in 6.1 means these two references cannot be byte-identical regardless of name. This reinforces a general principle rather than resolving this specific case: hashes are the reliable identity check when both files are recoverable; filenames and screenshot-reported sizes are not, and should not be treated as authoritative on their own.

6.3 FAT32 vs. NTFS expectations

Observation: the USB drive is formatted FAT32 (confirmed in Section 2), meaning artifacts such as \$MFT, \$LOGFILE, \$USNJRNL, and Windows registry hives do not exist on this volume.

Status: resolved. This is an expected property of the filesystem, not evidence of tampering or an examination gap. Understanding the underlying filesystem before analysis prevents an investigator from chasing artifacts that were never going to be there.

6.4 Evidence labels require context

Observation: the eBay laptop delivery photo (Finding 5.7) is watermarked "FIN-WS-07 - evidence photo", the same identifier as the workstation under investigation. Read literally, this appears to be a timeline contradiction: how could the workstation's identifier appear on a personal item purchased after the fact?

Verification: every other document and image in the exhibit set carries a similar boilerplate stamp identifying the case, not just this one photo.

Status: substantially resolved. The label is most likely an evidence-tracking identifier applied consistently across the synthetic training exhibits, not a literal claim that the ThinkPad and the workstation are the same machine. It is documented here rather than silently corrected, since the underlying convention has not been confirmed directly with the exhibit's originator.

6.5 Verify your tools, not just your evidence

Observation: Autopsy's raw SQLite table viewer displayed Chrome's last_visit_time as an unusable six-digit year (see Finding 5.10 for the full technical explanation).

Verification: rather than treating the displayed date as authoritative, the raw History database was extracted and decoded independently using the WebKit epoch formula. A peer independently loaded the same evidence in a separate session and observed the identical rendering issue, supporting that this is a reproducible tool limitation rather than a one-off configuration problem.

Status: resolved. This was a display bug in the examination tool, not a defect in the evidence. The exhibit's creator was also contacted and corroborated the observation.

Examiner's note: *good forensic work is not just about finding evidence, it is about validating every observation, testing the assumptions behind it, and making sure each conclusion can withstand scrutiny. That is what keeps an unresolved anomaly from becoming an opening for the defense.*

7. Timeline of Events

The timeline below interleaves corrected Web History timestamps with on-disk document and receipt dates. All timestamps are UTC.

Timestamp (UTC)	Event	Source Artifact
2023-09-15 10:05:30	Google search: “forensic accounting jobs accra”	Web History
2023-09-15 10:06:10	linkedin.com/jobs visited (via search-result link)	Web History
2023-09-15 10:18:45	jobberman.com.gh/ visited (typed directly)	Web History
2023-09-15 10:22:30	jobberman.com.gh/jobs?q=accountant visited	Web History
2023-09-18 14:10:40	Google search: “how to export quickbooks company data”	Web History
2023-09-18 14:30:05	dropbox.com/home revisited, logged in	Web History
2023-09-18 14:33:20	dropbox.com/upload visited	Web History
2023-09-18 ≈14:34	Dropbox upload confirmed: Client_Master_List_Adinkra.xlsx and AdinkraMFI_Q3_Backup.qbb uploaded to /Personal/ByKA	Screenshot_Dropbox_Upload_ClientList.png
2023-09-18 14:41:07	Self-addressed email sent, subject “backup”, shares the Dropbox link and states “before I hand in notice”	Email_Dropbox_ShareLink.pdf
2023-09-18 14:55:00	Google search: “starting an accounting firm in ghana”	Web History
2023-09-18, not recorded	RGD business name registration filed for SANKOFA ACCOUNTING & ADVISORY, ref RGD/BN/2023/0091273, GHS 100 paid	Receipt_RGD_Business_Registration.png; RGD_Business_Name_Application.pdf
2023-09-19 09:55:37	eBay search: “laptop for sale”	Web History
2023-09-19 09:55:43	eBay item viewed: Lenovo ThinkPad P50s, £589.99	Web History
2023-09-19 09:55:52	Gmail accessed	Web History
2023-09-19 09:55:58	Outlook Live visited	Web History
2023-09-19 ≈09:56	eBay order placed, order #12-11834-95027, total GBP 634.19	Receipt_eBay_ThinkPad_P50s.png
2023-09-19 09:56:24	dropbox.com/ and dropbox.com/home revisited	Web History
2023-09-19 09:57:23–09:58:08	Leisure browsing: Netflix, IMDb, Google, Formula 1. Last page visited overall: “Latest News” at 09:58:08	Web History

Timestamp (UTC)	Event	Source Artifact
2023-09-20, not recorded	Resignation letter drafted, not sent, effective resignation date 6 Oct 2023	Resignation_Letter_DRAFT.pdf

Note: the ThinkPad was delivered 3 October 2023 (IMG_20231003_ThinkPad_delivered.jpg), within the eBay receipt's estimated delivery window of 2 to 9 October 2023. This falls outside the 15 to 20 September window above but is included for completeness, as it closes the purchase-to-delivery chain.

8. Conclusion

The evidence confirms that the subject conducted job-search and business-formation research on company time, registered a competing business, and drafted a resignation letter within the reviewed window. Data exfiltration is confirmed to a personal Dropbox account and to the USB drive itself: the client spreadsheet and QuickBooks backup are recoverable in both locations, and the self-addressed email, upload screenshot, and Web History entry corroborate one another independently. The apparent timestamp discrepancy identified during initial review is resolved and attributable to a display limitation in Autopsy's raw SQLite table viewer, not to evidence tampering; browser activity, login data, and receipts are consistent with each other throughout to within seconds. Of the five items examined in Section 6, three are resolved (the FAT32 filesystem scope, the FIN-WS-07 evidence label, and the Autopsy timestamp display bug); two remain open and would benefit from clarification with the exhibit's originator: the file-size mismatch and the filename-order inconsistency between the Dropbox-side records and the USB-resident file, for which hash comparison could not be performed because only one side of the comparison has recoverable byte content.

9. Exhibits / Appendices

- **Appendix A:** Hash verification output and the WebKit-epoch SQL query, `datetime(last_visit_time/1000000-11644473600,'unixepoch')`, run against the extracted History database.
- **Appendix B:** Screenshots are embedded inline within Section 5 alongside the finding they support; full-resolution originals are available in the source E01 image.
- **Appendix C:** Not applicable. This case involves no network-based or malware indicators of compromise; behavioral indicators are documented in Section 5.
